Days of the Moons Age decreasing from the Full to the Change.

The Moon comes to the South in the Morning.

The Moon shines in the Morning.

IN the Fifth Column of this *Almanack*, you have the *Age* of the *Moon* ſtanding againſt every day in the Year, by help whereof and this little *Table*, you may nearly find

I. At what hour and minute the Moon will be juſt in the South, either evening or morning.

II. How many hours and minutes ſhe will *ſhine*, either at night or next morning.

III. At what time the Moon *riſeth* or *ſetteth*.

IV. The *hour* of the *night*, by the *ſhadow* of the *Moon* upon any *Sun-Dial*.

I. To find at what time the Moon will be due South.

Example, Upon the 22d. of *March*, the Moon being then 10 days old, I would know at what time the Moon will be upon the *Meridian* or *South*.

Look in the firſt Column of this Table for 10, the *Moons Age* increaſing, and right againſt it in the ſecond Column, you ſhall find 8 hours 0 m. at which time the *Moon* will be juſt *South* in the even.

II. To find how long the Moon ſhineth.

Example, Upon the 18 of *March*, the Moon that day being 6 days old, I would know how many hours and min. ſhe *ſhineth* that night.

Look

Look for 6 (the *Moons age*) in the firſt Column of this Table, and right againſt it (in the third Column) you ſhall find 4 hours 48 min. and ſo long will the *Moon ſhine* that *Evening*, becauſe the Moon increaſeth.

III. To find at what time the Moon Riſeth and Setteth.

1. If the Moon be increaſing, that is, if ſhe be leſs than 15 days old, *adde* the hours and minutes of her *ſhining*, to the hours and minutes of the the *Suns Riſing*, and the ſum will be the time of the *Moons Riſing*. But,

2. If the Moon be decreaſing, that is, if ſhe be above 15 days old, *ſubſtract* the hours and minutes of her *ſhining* from the hours and minutes of the *Suns Riſing*, and the remainer will be the time of the *Moons Riſing*.

For the Moons Setting.

1. If the Moon be leſs than 15 days old, *adde* the time of her *ſhining* to the time of the *Suns ſetting*, the ſum is her *ſetting* —— But

2. If the Moon be above 15 days old, *ſubſtract* her *ſhining* from the *Suns ſetting*, the remainer is her *ſetting*, adding or ſubſtracting 12 hours if need be.

IV. To find the hour of the Night by the Moons Shadow on a Sun-Dial.

Find at what time the Moon comes to the South as before, which known, mark how much the Shadow upon the Dial wants of 12, which take from the time of the Moons coming to the South, the remainder is the hour of the Night. But if the Shadow be paſt 12, add thoſe hours to the coming of the South, and the Sum is the hour of the Night.

Example. Upon the 5th. of *April*, the Moon being 13 days old, and comes to the South at 20 h. 24 m. and that Night I find the Shadow at 9 h. 30. m. which wants 2 h. and a half of 12, wherefore take the 2 h. and 30 m. from 10 h. 24 m. and there will remain 7 h. 54 m. for the hour of the Night. But if the Shadow had been 2 h. 30 m. after 12, thoſe added to 10 h. 24 m. would make 12 h. 54 m. for the hour of the Night.

The Uſe of the SUN-DIAL.

FOr the ready finding of the hour of the Day by this *Dial*, you muſt provide a ſtreight Staff or Ruler, which muſt firſt be divided into Ten equal parts, and then each of thoſe into ten other ſmaller parts, ſo will the whole Staff or Ruler be divided into 100 equal parts, which may be numbred by 10, 20, 30, *&c.* to 100: And ſo is it fitted for Uſe.

Now when you would find the hour, you muſt erect your Staff or Ruler perpendicular, that is, ſet it upright upon ſome plain level ground, floor, or table, and note the place where the end of the ſhadow did fall, and with your Staff meaſure the length of the ſhadow in Staves lengths, and hundred parts of the length, according as 'tis numbred.

Example, Suppoſe that upon the 16 day of *January* I do erect my Staff perpendicular, and meaſuring the length of the ſhadow thereof, I find it to be exactly 3 times its length; wherefore, finding the 16 day at the top of the moneth of *January*, I find 3, 0 to ſtand againſt the 16 day, and at the top find XII, which tells me it is then juſt 12 a Clock. —— *Example* 2. Suppoſe that upon the 6 of *May* I erect my Staff as before, and meaſuring the ſhadow thereof, I find it to be twice the length of the Staff, and 24 parts more; wherefore, I look at the top of the Dial in *May*, for the 6 day, and caſting my eye along that line, towards the right hand, I find 2, 24, to ſtand in that Column, at the top of which is VII, V, which tells me it is either 7 of the Clock in the morning, or 5 in the afternoon. —— *Example* 3. Upon the 16 of *April*, I find the length of the ſhadow to be once the Staffs length and 30 parts more; I look in *April* for the 16 day in the Dial, and in the line againſt it for 1, 30, and againſt it in the fifth Column I find 1, 33 (which is the neareſt number neareſt to 1, 30, in the Table) over which there ſtands IX and III, which ſhews that it is almoſt 9 a clock in the morning, or a little after 3 in the afternoon. —— *Example* 4. Upon the 26 of *June* I find the length of the ſhadow of the Staff to be once the whole length, and 20 parts; if I look for this number 1, 20, in the Sun-Dial againſt the 26 of *June*, I can find no ſuch number, but the neareſt to it leſs in that line is 1, 01, over which ſtands IX, III, and the neareſt number to it, greater, is 1, 38, over which ſtands VIII, IV; ſo that you may conclude the hour to be between 8 and 9 in the morning, or between 3 and 4 in the afternoon. A little practice will make all this plain: For *Uſus optimus Magiſter*.

Ateman's true Spirit of *Scurvey Graſs*, both Plain and Golden, ſo long famous for the cure of the Scurvey, Gout, Dropſie, and other Chronical Diſeaſes; are ſtill prepared by *John Hooker* in *Pauls Chain* near *Doctors Commons*. Price One Shilling the Bottle.

Things neceſſary for Chapmen to know.

A Dicker of Hides or Skins of Leather, 10 Skins
A Chaldron of Coles, 36 Buſhels
A Load of Timber, 50 Solid Foot
A Hogſhead of Wine, 63 Gallons
A Barrel of Beer, 36 Gallons
A Barrel of Ale, 32 Gallons
A Groſs, 144 or 12 Dozen
A Weigh of Cheeſe, 256 Pound
Days in a Year, 365
Weeks in a Year, 52
A Rowl of Velam or Parchment, 10 Skins
A Ream of Paper, 500 Sheets, or 20 quires
A Tun of Wine, 252 Gallons
An Acre of Land, 160 Perches
In a Rod of Land, 40 Perches
In a Perch of Land, 272¼ Foot
In a Perch, Pole, or Rod in Length only, 16½ Foot
A Bale of Paper, 10 Reams
A Pipe or But of Wine, 126 Gallons
In a Laſt of Corn, 10 quarters, or 80 Buſhels
A Tun of Iron, 20 hundred weight or 2240 pound weight
A Fodder of Lead, 19½ hundred weight, or 2184 pound
A Tod of Wooll is 28 Pound,
A Sack, 364 pound
A Laſt, 4368 ponnds
A Load of Bricks, 500 Bricks

To knowing the Price of the Pound Weight of any Commodity in Farthings, to know the Price of the great Hundred (or 112 l. Weight.)

Take every Farthing that One Pound doth Coſt.
Then reckon Two Shillings and a Groat.
And that's the price of the Great Hundred Weight.

THis Table will ſerve for many good purpoſes, but it is h principally intended for the Chapmans uſe in Buying Selling of any Commodity by the Yard, Ell, Pound, Hundr Gallon, *&c.* And its uſe is very eaſie; as by

EXAMPLE I.

At 9 d. *the Yard, what will* 70 *yards come to?*

Look for 9 *d.* at the head of the Table, and for 70 in firſt Row or Column of the ſame Table, and againſt 70, under 9 *d.* you ſhall find 2 *l.* 12 *s.* 6 *d.* And ſo much will Yards at 9 *d.* the Yard come to.

Alſo, *At* 5 d. *the Gallon,* 500 *Gallons will come to* 10 l. 8s.

And ſo of any other Price, or any other Number.

But if you cannot find your juſt Price at the head of the ble, nor your juſt Number on the ſide, you muſt then take it at twice, and adde them together, and the ſum ſhall anſ your Queſtion.

EXAMPLE II.

At 7 s. *the Dozen of Gloves, what will* 78 *dozen come t*

	l.	s.
70 Dozen at 7 *s.* comes to	24	10
8 Dozen at 7 *s.* comes to	2	16
The Sum	27	06

So that 78 Dozen at 7 *s.* the Dozen, come to 27 *l.* 6 *s.*

EXAMPLE III.

At 3 s. 5 d. 3 q. *the Ell, what will* 300 *Ells come to?*

	l.	s.	d.
300 Ells at 3 *s.* comes to	45	0	0
300 Ells at 5 *d.* comes to	6	5	0
300 Ells at 3 *q.* comes to	0	18	9
The Price of 300 Ells	52	3	9

EXAMPLE IV.

At 7 d. *halfpeny the Pound, what will* 92 *Pound come to*

	l.	s.	d
90 Pound at 7 *d.* the Pound, comes to	2	12	
2 Pound at 7 *d.* the Pound, comes to	0	01	2
90 Pound at a halfpeny, comes to	0	03	
2 Pound at a halfpeny, comes to	0	00	
The Price of 92 Pound, at 7 *d.* 2 *q.*	2	17
